Important Note
Please Read Carefully**Study Tips**

This product will provide you questions and answers along with carefully compiled and written by our experts. Try to understand the concepts behind the questions instead of cramming the questions.

Go through the entire document at least twice so that you make sure that you are not missing anything.

Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at CramBible an update 3-4 days before the scheduled exam date.

Here is the procedure to get the latest version:

1. Go to www.CramBible.com
2. Click on Member zone/Log in
3. The latest versions of all purchased products are download from here. Just click the links.

For most updates, it is enough just to print the new questions at the end of the new version, not the whole document.

Feedback

Feedback on specific questions should be send to web@CramBible.com. You should state: Exam number and version, question number, and login ID.

Our experts will answer your mail promptly.

- Section J :21 Questions & Answers**
- Section K :10 Questions & Answers**

Section A:**QUESTION NO:1**

You have a computer that runs Windows 7. The computer has a single volume. You install 15 applications and customize the environment. You complete the following actions: Create an export by using Windows Easy Transfer. Create a system image by using Backup and Restore. Install the User State Migration Tool (USMT) and run Scanstate. The disk on the computer fails. You replace the disk. You need to restore the environment to the previous state. What should you do?

- A. Install Windows 7, install USMT, and then run Loadstate.
- B. Install Windows 7 and then import the Windows Easy Transfer package.
- C. Start the computer from a Windows Recovery Environment (Windows RE) disk and then run Bcdboot. exe.
- D. Start the computer from a Windows Recovery Environment (Windows RE) disk and then restore the system image.

Answer: D**QUESTION NO:2**

Your network consists of one Active Directory domain. You have two computers named Computer1 and Computer2 that run Windows 7. Both computers are members of the domain. From Computer1, you can recover all Encrypting File System (EFS) encrypted files for users in the domain. You need to ensure that you can recover all EFS encrypted files from Computer2. What should you do?

- A. On Computer1, back up %systemroot%\DigitalLocker. On Computer2, restore %systemroot%\DigitalLocker.
- B. On Computer1, export the data recovery agent certificate. On Computer2, import the data recovery agent certificate.
- C. On Computer1, run Secedit.exe and specify the /export parameter. On Computer2, run Secedit.exe and specify the /import parameter.

D. On Computer1, run CIPHER.exe and specify the /removeuser parameter. On Computer2, run CIPHER.exe and specify the /adduser parameter.

Answer: B

QUESTION NO:3

You have a computer that runs Windows 7. The computer has System Protection enabled. You need to retain only the last System Protection snapshot of the computer. All other snapshots must be deleted. What should you do?

- A. Run Disk Cleanup for Programs and Features.
- B. Run Disk Cleanup for System Restore and Shadow Copies.
- C. From the System Protection Restore settings, select Turn off System Restore.
- D. From the System Protection Restore settings, select Only restore previous versions of files.

Answer: B

QUESTION NO:4

You have a computer that runs Windows 7. You have a system image of the computer. You need to restore a single file from the system image. You must achieve this goal in the minimum amount of time. What should you do first?

- A. From Disk Management, select Attach VHD.
- B. From Backup and Restore, select Restore my files.
- C. Restart the computer and run System Restore.
- D. Restart the computer and run System Image Recovery.

Answer: A

QUESTION NO:5

You have a computer that runs Windows 7. You need to identify how much disk space is occupied by previous versions. What should you do?

- A. At a command prompt, run Diskpart.
- B. At a command prompt, run Vaultcmd.
- C. From System, view the System Protection settings.
- D. From the properties of drive C, view the previous versions settings.

Answer: C

QUESTION NO:6

You have a computer that runs Windows 7. You manually create a system restore point. You need to restore a copy of a file stored on drive C from two days ago. You must achieve this goal in the minimum amount of time. What should you do?

- A. From Recovery, select System Restore.
- B. From Backup and Restore, select Restore my files.
- C. From the command prompt, run Wbadmin get items.
- D. From the properties of the file, select Previous Versions.

Answer: D

QUESTION NO:7

You have a computer that runs Windows 7. You add a new hard disk drive to the computer and create a new NTFS partition. You need to ensure that you can use the Previous Versions feature on the new drive. What should you do?

- A. From Disk Management, convert the new disk to a dynamic disk.
- B. From System Properties, configure the System Protection settings.
- C. From System and Security, enable BitLocker Drive Encryption (BitLocker).
- D. From the properties of the new drive, create a share and modify the caching settings.

Answer: B

QUESTION NO:8

You have a computer that contains the folders shows in the following table.

Folder name	Folder location
Data1	C:\Users\User1
Data2	C:\Users\User1

You accidentally delete the Data1 folder. You need to restore the contents of the Data1 folder. The solution must not overwrite any changes to the Data2 folder. What should you do?

- A. From Recovery, restore a system restore point.
- B. From the Previous Versions tab of the User1 folder, click Copy.
- C. From the Sharing tab of the User1 folder, modify the Caching settings.
- D. Start the computer and then press F8. Restore the Last Known Good Configuration.

Answer: B
