Important Note
Please Read Carefully**Study Tips**

This product will provide you questions and answers along with carefully compiled and written by our experts. Try to understand the concepts behind the questions instead of cramming the questions.

Go through the entire document at least twice so that you make sure that you are not missing anything.

Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at CramBible an update 3-4 days before the scheduled exam date.

Here is the procedure to get the latest version:

1. Go to www.CramBible.com
2. Click on Member zone/Log in
3. The latest versions of all purchased products are download from here. Just click the links.

For most updates, it is enough just to print the new questions at the end of the new version, not the whole document.

Feedback

Feedback on specific questions should be send to web@CramBible.com. You should state: Exam number and version, question number, and login ID.

Our experts will answer your mail promptly.

THE TOTAL NUMBER OF QUESTIONS IS 95**QUESTION NO: 1**

Your company has a single Active Directory Domain Services (AD DS) domain with Windows Server 2008 R2 member servers and 1,000 Windows 7 client computers. You are designing the deployment of a custom application.

You have the following requirements:

The application must be available to only users who need it.

Minimize network traffic during deployment.

You need to design a deployment strategy that meets the requirements.

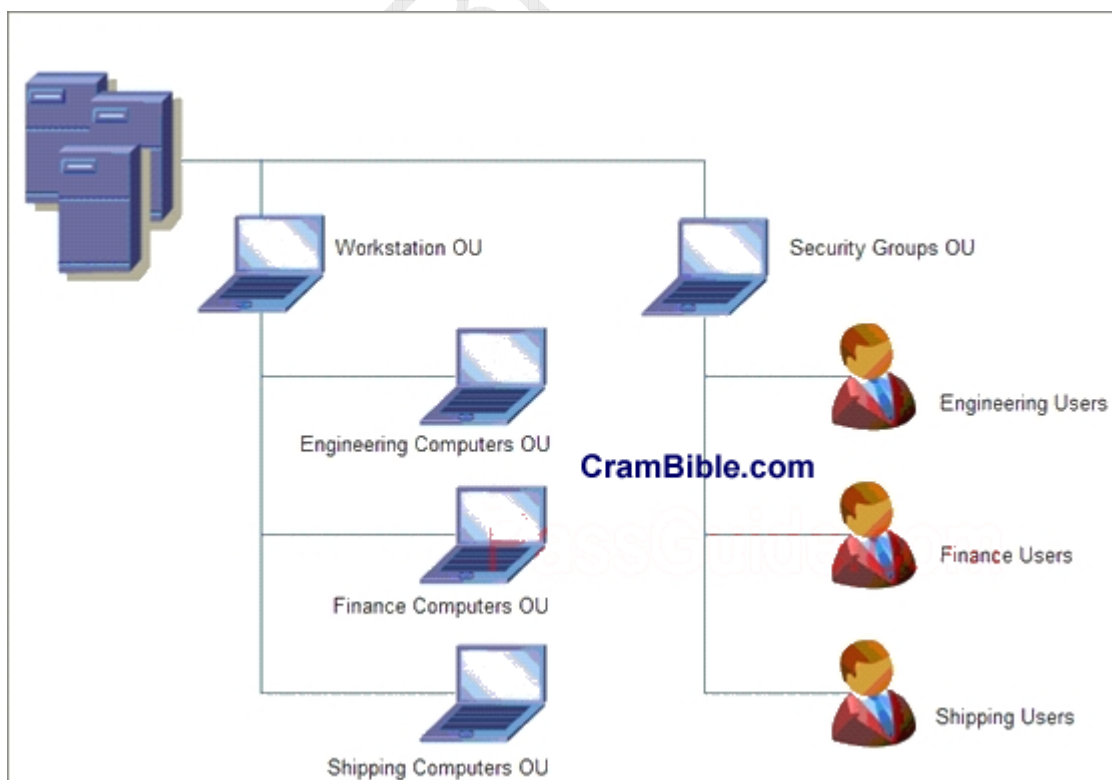

Which deployment method should you use?

- A. RemoteApp and Desktop Connections
- B. software installation in Group Policy
- C. Microsoft Application Virtualization (App-V)
- D. Microsoft System Center Configuration Manager 2007

ANSWER: A

QUESTION NO: 2

Your company's network has client computers that run Windows 7. Multiple users share the computers in the shipping department. These computers reside in the Shipping Computers organizational unit (OU). The network design is shown in the following diagram.

You are planning to deploy an application. The application is packaged as a Microsoft Windows Installer

package (MSI).

You need to deploy the application only to computers in the shipping department. Which two actions should you perform? (Each correct answer presents part of the solution.

Choose two.)

- A. Create a new Group Policy object (GPO) and add a software installation policy under the Computer Configuration container.
- B. Create a new Group Policy object (GPO) and add a software installation policy under the User Configuration container.
- C. Link the software installation policy to the Shipping Computers OU.
- D. Link the software installation policy to the Workstations OU.

ANSWER: AC

QUESTION NO: 3

Your company's network has client computers that run Windows 7. Multiple users share the computers in the shipping department. These computers reside in the Shipping Computers organizational unit (OU).

The company wants to deploy a new application. The application is not packaged.

You have the following requirements:

Deploy the application to all computers in the shipping department.

Perform the deployment from a central location.

You need to plan the software deployment process to meet the requirements. Which two actions should you include in the process? (Each correct answer presents part of the solution. Choose two.)

- A. Create a package by using Microsoft System Center Configuration Manager.
- B. Create a Group Policy object (GPO) and add a software installation policy under the Computer Configuration container.
- C. In the Group Policy Management Console, link the software installation policy to the Shipping Computers OU.
- D. Using Microsoft System Center Configuration Manager, create a collection that contains the shipping department users, and assign the package to the collection.
- E. Using Microsoft System Center Configuration Manager, create a collection that contains the shipping department computers, and assign the package to the collection.

ANSWER: AE

QUESTION NO: 4

Your company's network has client computers that run Windows 7. A software vendor releases version 2 of an application that your company uses. Your company currently uses version 1. Version 1 and version 2 are not compatible.

You plan to deploy version 2 of the application.

You have the following requirements:

Users must be able to run both versions of the application on their computers. Version 2 must be available

when a client computer is not connected to the network. You need to plan a software deployment process that meets the requirements.

What should you do?

- A. Deploy version 2 of the application by using Microsoft Application Virtualization (App-V).
- B. Deploy version 2 of the application as a Remote Desktop Services RemoteApp.
- C. Deploy version 2 of the application by using a Group Policy Software Installation policy.
- D. Deploy version 2 of the application by using a Microsoft System Center Configuration Manager package.

ANSWER: A

QUESTION NO: 5

You are planning to upgrade Internet Explorer.

You have the following requirements:

Create a report that identifies which computers are successfully upgraded. Do not install additional software on the client computers. You need to design a deployment method that meets the requirements.

What should you do?

- A. Use Internet Explorer Administration Kit (IEAK) and Group Policy.
- B. Use Microsoft System Center Configuration Manager.
- C. Use Windows Server Update Services (WSUS).
- D. Use Microsoft System Center Essentials.

ANSWER: C

QUESTION NO: 6

Your network has 1,000 client computers that run Windows 7.

You plan to deploy a new application.

You need to ensure that the application deploys only during non-business hours.

What should you do?

- A. Use Group Policy.
- B. Use Windows Deployment Services with a schedule cast.
- C. Use Microsoft System Center Configuration Manager.
- D. Use a logon script.

ANSWER: C

QUESTION NO: 7

Your company is planning to deploy Windows 7 to all client computers.

You have the following requirements:

Test an application to detect potential compatibility issues caused by User Account Control (UAC).

Monitor an application's operating system use.

You need to select the appropriate method to detect application compatibility issues.

What should you do?

- A. Use the Standard User Analyzer tool.
- B. Use the Standard User Analyzer Wizard.
- C. Use the standalone Setup Analysis Tool.
- D. Use the Setup Analysis Tool in a virtual environment.

ANSWER: A

QUESTION NO: 8

Your company uses Windows Update to download and install security updates on client computers.

When Microsoft releases a security update, you have the following requirements:

Establish which client computers require the security update. Identify what changes will occur as a result of the security update. Identify which applications might be affected by the security update. You need to select the appropriate tool to detect application-compatibility issues.

What should you do?

- A. Use the Inventory Collector.
- B. Use the Setup Analysis Tool.
- C. Use the Update Compatibility Evaluator.
- D. Use the Windows Compatibility Evaluator.

ANSWER: C

QUESTION NO: 9

Your company has 1,000 client computers that run Windows XP Professional x64. You are planning to deploy Windows 7 Enterprise x64. The company uses an application that is incompatible with Windows 7 Enterprise x64.

You have the following requirements:

Provide all users with access to the application. Deploy and manage the application by using a centralized solution. You need to design a solution that meets the requirements.

What should you do?

- A. Install the application on all client computers by using Group Policy, and then use the Compatibility tab.
- B. Install the Microsoft Enterprise Desktop Virtualization (MED-V) v2 package on each client computer.
- C. Install the Microsoft Application Virtualization (App-V) client on each client computer, and stream the application by using App-V.
