Study Tips

This product will provide you questions and answers along with detailed explanations carefully compiled and written by our experts. Try to understand the concepts behind the questions instead of cramming the questions.

Go through the entire document at least twice so that you make sure that you are not missing anything.

Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at CramBible an update 3-4 days before the scheduled exam date.

Here is the procedure to get the latest version:

1. Go to www.CramBible.com
2. Click on Member zone/Log in
3. The latest versions of all purchased products are download from here. Just click the links.

For most updates, it is enough just to print the new questions at the end of the new version, not the whole document.

Feedback

Feedback on specific questions should be send to web@CramBible.com. You should state: Exam number and version, question number, and login ID.

Our experts will answer your mail promptly.

THE TOTAL NUMBER OF QUESTIONS IS 50**QUESTION NO: 1**

You are a system builder at CramBible .com.

Your network uses a Microsoft Windows Server? 2003 that is running the Dynamic Host Configuration Protocol (DHCP) service and is set up as a technician computer. You installed OPKTools from Microsoft Windows? XP Service Pack 2.

You want to set a static Internet Protocol (IP) address for the Microsoft Windows Preinstallation Environment on the computer that you are installing for your customer. During the preinstallation process, you receive the following error message: Cannot Authenticate to Server.

What should you do? (Each correct answer presents part of the solution. Choose two.)

- A. Edit the winbom.ini file in the WinPE.net section to include the Gateway= parameter.
- B. Edit the winbom.ini file in the WinPE.net section to include the StartNet= parameter.
- C. Edit the winbom.ini file in the WinPE.net section to include WinPEFirewall=On.
- D. Edit the winbom.ini file in the WinPE.net section to include the IPConfig= parameter.

Answer: A,D

QUESTION NO: 2

You are a system builder at CramBible .com.

Your network is using a four-port router that is running the Dynamic Host Configuration Protocol (DHCP) service. Your technician computer runs Microsoft Windows? 2000 Professional and is connected to the four-port router.

You have installed a media reader card in a computer, and you use OPKTools to preinstall this computer over the network. In Audit mode you discover that the media card reader device has failed and that it is not enumerated in Device Manager.

You need to preinstall your computers with this card reader.

What should you do? (Each correct answer presents part of the solution. Choose two.)

- A. Add the DriverSigningPolicy=Ignore parameter in the Unattended section of the unattend.txt answer file to preinstall the unsigned driver.
- B. Remove the incorrect driver that was installed.
- C. Add the DriverSigningPolicy=Warn parameter in the Unattended section of the unattend.txt answer file.
- D. Obtain an updated driver (if one exists) from the manufacturer.
- E. Run sigverif.exe from a command prompt to verify that all the drivers are signed.
- F. Add the DriverSigningPolicy=Block parameter in the Unattended section of the unattend.txt answer file.

Answer: A,D

QUESTION NO: 3

You are a system builder at CramBible .com. Your network is using a four-port router that is running Dynamic Host Configuration Protocol (DHCP). Your technician computer runs Microsoft Windows? 2000

Professional and is connected to the four-port router. You have created a configuration set by using OPKTools.

When you attempt the preinstallation on a new computer, you find that the hard drive is not formatted correctly. You open the winbom.ini answer file in the configuration set, and you see the following:

```
[Disk1.config]
```

```
Size1 = *
```

```
PartitionType1 = PRIMARY
```

```
FileSystem1 = NTFS
```

```
QuickFormat1 = YES
```

You need to perform an unattended preinstallation of Microsoft Windows on three new computers that you are shipping to customers.

What should you do? (Each correct answer presents part of the solution. Choose two.)

- A. Add Wipe Disk=Yes to the winbom.ini answer file.
- B. Add SetActive1=Yes to the winbom.ini answer file.
- C. Change Size1=* to Size1=10000 in the winbom.ini answer file.
- D. Change QuickFormat1=YES to QuickFormat1=NO in the winbom.ini answer file.

Answer: A,B

QUESTION NO: 4

You are a system builder at CramBible .com. The company network is not functional, and there is no network access to the technician computer. You need to preinstall Microsoft Windows?

operating systems on three computers. You have three copies of the Windows operating systems. You have decided to use a winnt.sif file to perform a Windows CD-based preinstallation on these computers. You manually create a winnt.sif file and copy it to three floppy disks. You place a CD of each Windows operating system in the DVD drive of each computer. You start each computer. When you see the initialization screen on each computer, you insert the floppy disk with the winnt.sif file on it into each computer. Two of the computers are preinstalled properly. The third computer, however, begins the preinstallation process but stops with the command prompt window open and the cursor at D:\i386\System32. You need to preinstall the third computer.

What should you do? (Each correct answer presents part of the solution. Choose two.)

- A. Remove the CD from the drive, clean it, and begin the process again.
- B. Check the Hardware Compatibility list to make sure that all hardware is compliant.

- C. At the command prompt, type `ipconfig /all` to make sure that Transmission Control Protocol/Internet Protocol (TCP/IP) is bound to the adapter.
- D. Remove the Microsoft Windows OEM Preinstallation Kit (OPK) CD from the DVD drive and place the Windows operating system CD into the DVD drive.

Answer: B,D

QUESTION NO: 5

You are a system builder at CramBible .com.

Your network uses a Microsoft Windows Server? 2003 that is running the Dynamic Host Configuration Protocol (DHCP) service and is set up as a technician computer.

You installed OPKTools from Microsoft Windows? XP Service Pack 2. You run Setup Manager and create a configuration set to install a Microsoft Windows operating system.

You edit the `winbom.ini` file in the configuration set and copy the `winbom.ini` file to a floppy disk. You boot the master computer by using your Microsoft Windows Preinstallation Environment CD, and you insert the floppy disk with the `winbom.ini` file.

You get the following error message: Cannot Authenticate to the Server.

What should you do? (Each correct answer presents a complete solution. Choose two.)

- A. Verify that the passwords used for connecting are the same in the configuration set and on the floppy disk.
- B. Verify that the `Gateway=` parameter is included in the `winbom.ini` answer file.
- C. Verify that the `StartNet=yes` parameter is included in the `unattend.txt` answer file.
- D. Verify that the network interface card in the master computer is plugged in to the crossover cable.

Answer: A,B

QUESTION NO: 6

You are a system builder at CramBible .com. You have a four-port router that is running the Dynamic Host Configuration Protocol (DHCP) service. You are using a computer running Microsoft Windows? 2000 Professional as your technician computer. You have created a configuration set and are using the following `winbom.ini` file to install the network drivers:

```
[PnpDrivers] | \\opktools\drivers\Chipset = Chipset | \\opktools\drivers\video = video | \\opktools\drivers\Audio = Audio | \\opktools\drivers\Modem = Modem | Username = opk | Password = | [PnpDriverUpdate] | WaitForPNP = YES | TargetRoot = Windows\OEMdrivers | UpdateInstalledDrivers = No
```

When you run the preinstallation, your updated drivers are not installed. You need to install updated drivers. What should you do? (Each correct answer presents part of the solution. Choose two.)

- A. Include the `OEMPnPDriversPath` parameter in the `PnPDriverUpdate` section of the `winbom.ini` file.
- B. Remove the `username` and `password` parameters in the `PnPDrivers` section. Place them in the `PnPDriverUpdate` section.

- C. Change the WaitForPnP=Yes parameter to WaitForPnP=No.
- D. Remove lines in PnPDrivers section to only include \\opktools\drivers = drivers.
- E. In the PnPDrivers section, change UpdateInstalledDrivers=No to UpdateInstalledDrivers=Yes.

Answer: B,E

QUESTION NO: 7

You are a system builder at CramBible .com.

Your network uses a Microsoft Windows Server? 2003 computer that is running the Dynamic Host Configuration Protocol (DHCP) service.

You create a configuration set for a Microsoft Windows Small Business Server 2003 installation and preinstall a computer for your customer. You create the directory \Sysprep and copy all the necessary files into this folder. You then run sysprep on the computer by using the following command: C:\Sysprep\Sysprep.exe -dc ?;?*?Creseal. You reboot the computer and receive the following error: LSASS.EXE - System Error. What should you do?

- A. Use the OEM version of Windows Small Business Server 2003.
- B. Use the MSDN version of Windows Small Business Server 2003.
- C. Use an open-license version of Windows Small Business Server 2003.
- D. Use the Retail version of Windows Small Business Server 2003.

Answer: A

QUESTION NO: 8

You are a system builder at CramBible .com. Your network is using a four-port router running Dynamic Host Configuration Protocol (DHCP). Your technician computer is running Microsoft Windows? 2000 Professional and is connected to the four-port router. You have created a configuration set by using the OPKTools specified for use in preinstalling Microsoft Windows on three computers. You have the Microsoft Windows Preinstallation Environment CD from a three-pack of CDs for Microsoft Windows XP Professional. You start the Windows Preinstallation Environment CD on one of the computers and find that Windows Setup stops. You receive an error message stating that your Product Key is missing or invalid. You need to perform an unattended installation of Windows without producing this error. What should you do? (Each correct answer presents part of the solution. Choose two).

- A. Verify that a Product Key is included in the oobeinfo.ini answer file.
- B. Verify that a Product Key is included in the unattend.txt answer file.
- C. Verify that the Product Key in the oobeinfo.ini answer file matches the SKU that is being installed.
- D. Verify that the Product Key in the sysprep.inf answer file matches the SKU that is being installed.
- E. Verify that a Product Key is included in the sysprep.inf answer file.
