Important Note
Please Read Carefully

Study Tips
This product will provide you questions and answers along with detailed explanations carefully compiled and written by our experts. Try to understand the concepts behind the questions instead of cramming the questions.

Go through the entire document at least twice so that you make sure that you are not missing anything.

Latest Version
We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at CramBible an update 3-4 days before the scheduled exam date.

Here is the procedure to get the latest version:

1. Go to www.CramBible.com
2. Click on Member zone/Log in
3. The latest versions of all purchased products are download from here. Just click the links.

For most updates, it is enough just to print the new questions at the end of the new version, not the whole document.

Feedback
Feedback on specific questions should be send to web@CramBible.com. You should state: Exam number and
version, question number, and login ID.

Our experts will answer your mail promptly.

THE TOTAL NUMBER OF QUESTIONS IS 220

QUESTION NO: 1 You are replicating data over long distances using 1 Gbps B-series (Brocade) fabric switches. Extended fabrics (increased buffer-to-buffer credits) should be used when the minimum distance exceeds _____ km.

A. 10
B. 15
C. 20
D. 35

Answer: A

QUESTION NO: 2 Why do customers want to extend the SAN?

A. to make SANs more manageable
B. to scale SANs with more switches
C. to increase the speed of data transport
D. to connect geographically distributed data centers

Answer: D

QUESTION NO: 3 You are using 2 Gb switches connected in a dual ring topology with two ISLs. What is the maximum cross-sectional bandwidth?

A. 200 Mbyte/sec
B. 350 Mbyte/sec
C. 400 Mbyte/sec
D. 800 Mbyte/sec

Answer: D

QUESTION NO: 4 A customer has implemented a multi-switch core-edge fabric with B- series (Brocade) 2 Gbps fabric switches. How can the SAN administrator back up the SAN configuration data every time a change is made to the SAN? (Choose two.)

A. download the switch and zoning configurations with the Fabric Manager
B. use a Telnet session with FTP to download the switch and zoning information C. download the switch and zoning configurations with the High Availability Fabric

Manager
D. Switch configuration and zoning configuration are automatically saved to a pre-defined location before a change is applied to either a switch or the fabric.

Answer: A, B

QUESTION NO: 5 What is a design property of the Core+Edge+Leaf SAN topology?

A. It allows many devices to share a single ISL.
B. It allows many hosts to share a single storage port.
C. It can start at one switch and grow almost without limit.
D. It involves simplex I/O, meaning only one path is utilized for I/O.

Answer: C

QUESTION NO: 6 What is dark fiber?

A. fiber optic cable that has black color coding
B. a special version of single-mode 9 fiber optic cable
C. shared fiber optic cable running from a to b offered by a service provider
D. unused fiber optic cable running from a to b offered by a service provider

Answer: D

QUESTION NO: 7 A SAN administrator has an existing test SAN, based on 1 Gbps B-series (Brocade) fabric switches. To evaluate the compatibility of 1 Gbps and 2 Gbps switches, the administrator powers on a 1 Gbps and a 2 Gbps fabric switch (factory default settings). An ISL is then installed between the two fabric switches. The administrator notices that the fabric segments. What are two possible causes of this segmentation? (Choose two.)

A. The zoning information is incompatible.
B. The Core PID parameters are conflicting.
C. The new switch has a conflicting Domain ID.
D. The speed on the port must first be set for 1 Gbps operation.

Answer: B, C

QUESTION NO: 8 How can you reduce Total Cost of Ownership (TCO) of a SAN?

A. identify and address ain levels?at upper management
B. identify and address ain levels?when reducing operating staff
C. identify and address SAN islands in large corporations that will merge from smaller organizations
D. identify and address ain levels?associated with data movement, data sharing, and data growth

Answer: D

QUESTION NO: 9 What is the recommended way to fail over a site in a replication solution?

A. as a result of an application timeout
B. by an operator with scripted procedures
C. as a result of the loss of the inter-site links
D. by the absence of heart beat of the source array

Answer: B

QUESTION NO: 10 What is a common cause of downtime in a customer's IT application, databases, and infrastructure?

A. human error
B. power outages
C. computer viruses
D. software malfunction

Answer: A

QUESTION NO: 11 What are three OVSAM primary device discovery components? (Choose three.)

A. SNMP discovery
B. host agent discovery
C. LUN masking discovery
D. system reboot discovery
E. managed hosts discovery
F. discovery by event modeling

Answer: A, B, E

QUESTION NO: 12 What are two benefits of migrating from one SAN topology to another SAN topology? (Choose two.)

A. Zone conflicts and limitations are resolved.
B. The management of the SAN is simplified.
C. Many smaller switches are consolidated into fewer large fabric switches.
D. The SAN can scale to support additional storage devices and applications servers.

Answer: C, D

QUESTION NO: 13 Who is responsible for the security in the SAN?

A. SAN Change Manager
B. LAN Security Manager
C. SAN Security Manager
D. SAN Configuration Manager

Answer: C

QUESTION NO: 14 What does a SAN high availability configuration provide?

A. a non-disruptive merging of multiple SANs
B. a non-disruptive upgrade process of the iSCSI protocol definitions
C. the capability to test new switch firmware in a production environment
D. non-disruptive SNMP messages to the system management framework

Answer: A

QUESTION NO: 15 What does SAN performance management monitor and analyze?

A. SNMP traffic
B. SAN traffic patterns
C. RSCN traffic patterns
D. SAN name server traffic

Answer: B
